A. Title: Primary structures of hypertrehalosaemic neuropeptides isolated from the corpor handles and of the stick insect Extatosoma tiaratum assigned by tandem fast atom bombard A. Reference number: 808995; MuID:90253659
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Note: the amino-terminal residue forms pyrrolidone carboxylic acid; therefore, we have
A; Residues: 'Z',2-10 <GAB2>
C; Comment: Hypertrehalosemic factor II lacks the tryptophan modification.
C; Comment: This peptide raises hemolymph levels of trehalose in the cockroach Periplanet
C; Comment: This peptide raises hemolymph levels of trehalose in the cockroach Periplanet
C; Superfamily: adjookinetic hormone
C; Reywords: amidated carboxyl end; glycoprotein; hormone, neuropeptide; pyroglutamic aci
E; Modified site: pyrrollidone carboxylic acid (GIn) #status experimental
F; 8/Bhinding site: carbohydrate (Trp) (covalent) #status experimental
F; 10/Modified site: amidated carboxyl end (Thr) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

(PeA-CAH-II) (LeD-CC-II) (Hypertrehalosaemic neuropeptide II).
                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                            Proc. Natl. Acad. Sci. U.S.A. 86:8161-8164(1989).

-!- FUNCTION: THIS HORMONE, RELEASED FROM CELLS. IN THE CORPORA
CARDIACA AFTER THE BEGINNING OF FLIGHT, CAUSES RELEASE OF
DIGLYCERIDES FROM THE FAY BODY AND THEN STIMULATES THE FLIGHT
MUSCLES TO USE THESE DIGLYCERIDES AS AN ENERGY SOURCE.
-!- SIMILARITY: BELONGS TO THE AKH / HRTH / RPCH FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Structures of two cockroach neuropeptides assigned by fast atom bombardment mass spectrometry."; Biochem. LY DIOCHOM. 128:33-328 (2000).

-I FUNCTION: DEGRADES HEPARIN AND HEPARAN SULFATE.

CC CATALINING 1,4-LINKED GLOURONATE OR IDDRONATE RESIDUES AND 1,4-CC CONTAINING 1,4-LINKED GLOURONATE OR IDDRONATE RESIDUES AND 1,4-CC CONTAINING 1,4-LINKED GLOURONATE OR IDDRONATE RESIDUES TO ALPHA-LINKED 2-SDECKY-6-SULFO-D-GLUCOSE RESIDUES TO GIVE COLIGOSCICARIDES WITH TERMINAL 4-DEOXY-ALPHA-D-GLUC-4-CC CONTAINING 1,4-LINKED SWITH TERMINAL 4-DEOXY-ALPHA-D-GLUC-4-CC CONTAINE REGULATION INHIBITED BY CUPRIC ION, LEAD AND SOME AGENTS CC ENZYME REGULATION INHIBITED BY CUPRIC ION, LEAD AND SOME AGENTS BY REDUCING AGENTS SUCH AS DITHIOTHREITOL AND 2-MERCAPTOETHAND.

CC -!- PTM: THE N-TERMINAS IS BLOCKED.

- MISCELLANDOUS: THE ENZYME HAS AN ISOELECTRIC POINT OF 8.7. ITS CF. CT. TITLE TO THE OPTIMUM TEMPERATURE IS 45 DEGREES

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relavant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design -

                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from

capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of antigenic proteins or DNAs capable of antigenic proteins or peptides, in the manufacture of the invention have virucide and cytostatic reals. The products of the invention have virucide and cytostatic activity and can be used for interferon as inducers of antigen-specific reals. The action of receive as inducers of antigen-specific reals. The action of real (CTL) by administering an antigenic peptide in an incomplete precured adjuvant (IRA) and summand the manufacture of a medicament for inducing antigen-specific reals in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament infection is useful in the manufacture of a medicament for infection in the creatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of plant genomes. The present sequence is one such peptide from Arabidopsis thaliana. The peptides of the present invention are useful in an assay to identify a peptide, especially a peptide pesticide or harbicide. The peptides are also useful for tools for agricultural research and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A set of peptide ligands for agricultural research and development of therapeutic agents comprise specific complementary peptides to proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plant; peptide pesticide; peptide herbicide; agricultural research.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of plant genomes. The present sequence is one such peptide from Arabidopsis thaliana. The peptides of the present invention are useful in an assay to identify a peptide, especially a peptide pesticide or herbicide. The peptides are also useful for tools for agricultural research and

S peptide sequences (see AAW54286-90), respectively designated RW-1, RW-13 and RW-28, represent a peptide library derived from the AB loop (see AAW54291) of the Pleckstin homology (PH) domain (see AAW54285) of human cytohesin 1. They are encoded by comain (see AAW54285) of human cytohesin 1. They are encoded by mutagenesis of the DNA region (see AAV26487) encoding the AB loop. The average free energy of folding of mutant loop AB peptide RW-18 are average free energy of folding of mutant loop as peptide RW-18 cequence. The average free energy of folding of the 5 mutant comprendict integrity or the folding stability of the progenitor commain. The invention provides vectors that are used for the production of PH domain-like peptide libraries, which can be corduction of PH domain-like peptide libraries, and which may be especially novel binding or catalytic properties, and which may be sepecially nessenth or therapy, or as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vectors used to produce PH domain-like peptide libraries - which are screened for therapeutically useful peptide(s), e.g. to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homing peptide; organ; tissue; lung; pancreas; skin; retina; MDP;

The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, membrane dipeptidase (MDP). AAY48618 to AAY49066 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps
                                                                                                                                                                                                                                                       New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological

This invention describes a novel tumor-associated antigen C42 which has cytostatic activity. The invention also describes (a) immunogenic protein cytostatic activity. The invention also describes (a) immunogenic protein fragments or peptides (I) derived from C42; (b) a pharmaceutical composition for parenteral, topical, oral or local administration or tits fragments; (d) a recombinant DNA (IIa) that contains (II); and or its fragments; (d) a recombinant DNA (IIa) that contains (II); and induce a humoral immune response and, when presented by major compatibility complex molecules, a cellular immune response. C42, and its fragments, are used for immunotherapy of cancers that express C42 and its fragments, are used for immunotherapy of cancers that express C42 and its fragments, are used for immunotherapy of cancers that express C42 antibodies (Ab) and for diagnosis, e.g. to detect induction of an immune response and for optimization of treatment. Ab are used therappeutically connears that express C42. Nucleic acid (II) that encodes C42 can also be used for immunotherapy and cells that express C42 as antitumor vaccines.
                                                                                 Tumor-associated antigen C42, and related nucleic acids and antibodies, useful in immunotherapy of cancer and for diagnosis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human enone. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                           Gaps

The present sequence represents a mimotope which functionally mimics a binding site for a monoclonal antibody (MAb) which recognises an epitope within the human platelet glycoprotein (gp) ID/IX complex. More specifically the MAb is C-34. The mimotope peptide can be used for ratising antibodies, as probes to search for anti-mimotopes and to neutralise the inhibitory activity of those antibodies which recognise the epitope which is mimicked by the peptide. Anti-mimotopes can be used to modulate the adhesion, aggregation or agglutination of platelets by affecting von Willebrand factor interaction with the platelets through the gpt ID/IX receptor, e.g. as an anti-thrombotic drug which inhibits the ristocetin induced aggregation of platelets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present invention provides peptides which functionally mimic a binding site for a monoclonal antibody, where the monoclonal antibody is crecognises an epitope within the human glycoprotein ID/IX complex. Ceptides AAW1752 to AAW7182 are mimotopes which are capable of binding to monoclonal antibody C-34. The invention also provides an isolated an antibody, a second peptide, a carbohydrate, a DNA molecule can be manipody, a second peptide, a carbohydrate, a DNA molecule, an RNA molecule, or other naturally or chemically synthesised molecules. These drugs. A method has also been described for modulating the adhesion, selecting platelets and exposing them to an anti-mimotope molecule. The exposure affects von Willebrand factor interaction with platelets capped actor interaction with platelets.

Exposure affects von Willebrand factor interaction with platelets aggregation, or agglutination of the platelets. The peptide mimotopes minit mineraction mith manipulates the adhesion, aggregation, or agglutination of the platelets. The peptide mimotopes
                                    Mimotope; monoclonal antibody C-34; human; glycoprotein Ib/IX complex; binding site; platelet epitope; neutralise; aggregation; inhibition; von Willebrand factor interaction; adhesion; agglutination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; transferrin; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest; cerebrovascular disorder; cerebral ischemia; anglogemesis; nervous system disorder; Alzheimer's disease; infection; ocular disorder; corneal infection; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

The present sequence is a splice-variance region of a transferrin.

Transferrin polypeptides and polynucleotides are used to prevent,

treat or ameliorate a medical condition in e.g. humans, mice, rabbits,

creat, horses, cats, dogs, chickens or sheep. Disorders which are

diagnosed or treated include autoimmune disease e.g. rheumatoid

arthritis, hyperproliferative disorders e.g. neoplasms of the breast

or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular

clisorders e.g. cerebral ischemia, angiogenesis, nervous system disorders

disorders e.g. corneal infections caused by bacteria, viruses and

tugil and ocular disorders e.g. corneal infection. The polypeptides can

be used to aid wound healing and epithelial cell polyferation, to

ransplantation, for supporting cell culture of primary tissues, to

regenerate tissues and in chemotaxis. The polypeptides can also be used

analytical additive or preservative to increase or decrease storage
                                                                                                                                                                                                                                                                                             Isolated nucleic acid molecule encoding a human tranferrin protein is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

Sequencing method: high redundancy shotgun. Interspersed Repeats were identified with RepeatMasker (available from hittp://ftp.genome.washington.edu/RM/RepeatMasker.html) Simple sequence repeats were identified with sputnik (available from http://serac.mbt.washington.edu/~chrisa/software/sputnik.html).
